Unique iceball visibility allows precise control of the ablation zone throughout the cryotherapy procedure.\textsuperscript{1-6}

- The ablation zone can be selectively shaped to match the tumor.\textsuperscript{1,2,4,5}

- Monitoring the ablation margin reduces the risk of injury to adjacent critical structures.\textsuperscript{1-4}

- Multiple cryoablation needles can simultaneously be activated to treat large metastases.\textsuperscript{1,3,6}

Studies show clinically significant,\textsuperscript{7} durable pain reduction for the majority of metastatic bone tumor patients treated with cryotherapy.\textsuperscript{1,8,9,10}

Durable Pain Decrease Following Cryotherapy of Painful Bone Metastases\textsuperscript{9}

This material is restricted to use outside the United States
Compared to RFA, cryotherapy offers less peri-procedural pain and a shorter hospital stay.\textsuperscript{11}  

Serious complications are rare with cryotherapy.\textsuperscript{1,6,9}  

The intrinsic anesthetic properties of cryotherapy allow performing a procedure under mild sedation.\textsuperscript{1,2,13}

Indications for Use

The Galil Medical Cryoablation Systems are intended for cryoablative destruction of tissue during surgical procedures; various Galil Medical ancillary products are required to perform these procedures. Galil Medical Cryoablation Systems are indicated for use as a cryosurgical tool in the fields of general surgery, dermatology, neurology (including cryoanalgiesia), thoracic surgery, ENT, gynecology, oncology, proctology and urology. These Systems are designed to destroy tissue (including prostate and kidney tissue, liver metastases, tumors, and skin lesions) by the application of extremely cold temperatures. A full list of specific indications can be found in the Galil Medical Cryoablation System User Manuals.

Contraindications

There are no known contraindications.

Warnings / Precautions / Adverse Events

A thorough understanding of the technical principles, clinical applications, and risks associated with cryoablation procedures is necessary before using Galil Medical products to conduct cryoablation. Use of such products should be restricted to use by or under the supervision of physicians trained in cryoablation procedures with a Galil Medical Cryoablation System.

A full list of the warnings, precautions, and adverse events can be found by referencing the respective device Instructions for Use document or Cryoablation System User Manual.
